

Velatia is a benchmark, global, industrial, technological, family-owned group.

It contributes, through its different lines of business, to the development of electrical grids, electronics and communication networks, as well as promoting energy efficiency, aeronautics, intelligent engineering and a new housing concept; thereby providing efficient, high added value solutions.

Our customer orientation has led to the development of our extensive network of factories in Spain, France, Germany, Poland, Brazil, Mexico and China, helping to meet our customers' needs in more than 50 countries.

At Velatia
we are experts
in providing
solutions for
all types of
networks.

velatia

Electrical networks and smart grids

Manufactures equipment and provides solutions for electric power transmission and distribution, from generation to point of consumption, looking toward the near future, when electric power will be the basis of all smart cities, and in which **Ormazabal** will take a global leadership role.

Aeronautical components

Designs and manufactures advanced parts, the majority of which are components used in aircraft engines and turbines made by leading world manufacturers.

Telecommunications

Provides telecommunications infrastructure solutions that facilitate the deployment of both fixed and mobile networks, enabling voice and data coverage in diverse geographical areas.

Engineering and technological development for the digital transformation of businesses

It provides digital solutions and high added value services based on advanced technologies that increase the operating efficiency, income and user experience, accompanying its customers - companies or institutions - in the digital transformation process that is occurring in all sectors. Its activity is carried out in four important sectors: specialised business solutions to improve airport and city management and operations; integration and engineering projects for multiple infrastructures; projects for telecommunications and IT networks (collaboration, security and cloud); as well as the design and development of solutions in high-tech electronic goods.

Energy services

Stratenergy is the energy services company of **Velatia**. Capable of implementing efficient management of energy demand projects, its mission is to contribute to increasing, sustainable value creation for **Velatia**, through development and consolidation of its own business, while also supporting and strengthening already existing **Velatia** businesses.

Prefabricated concrete housing

Homm designs and manufactures prefabricated concrete houses. The innovative production process, evidencing the technological development of **Velatia**, is performed entirely in its factory, after which the house chosen is erected on the customer's plot.

Design engineering and development of electromechanical solutions

Design and industrialisation of mechanical, electronic and computer engineering solutions in the field of intelligent machines with the capability to manufacture prototypes and short series. It provides added value in differential, technologically advanced processes, in additive manufacturing and joining technologies.

Shared services unit

This is the shared services unit, responsible for the administrative management of our entire group, using common quality and cost optimisation criteria at the service of the **Velatia** strategic plan.
